

X: ideology, junkification, lock-in

Iván Rendo

Roadmap

Roadmap

1. What I have

Roadmap

1. What I have

2. Where to go from here?

Roadmap

1. What I have

2. Where to go from here?

I'd like “this” to be my JMP. Be honest / harsh!

First Research Question

First Research Question

Claims of right wing promotion on X

First Research Question

Claims of right wing promotion on X

We cannot observe (a lot of) content on X anymore

First Research Question

Claims of right wing promotion on X

We cannot observe (a lot of) content on X anymore

Q: Can we infer the ideology of content/platform?

First Research Question

Claims of right wing promotion on X

We cannot observe (a lot of) content on X anymore

Q: Can we infer the ideology of content/platform?

Idea: use a discrete choice model approach

First Research Question

Claims of right wing promotion on X

We cannot observe (a lot of) content on X anymore

Q: Can we infer the ideology of content/platform?

Idea: use a discrete choice model approach

Main mechanism: if content more right, more right users

First Research Question

Claims of right wing promotion on X

We cannot observe (a lot of) content on X anymore

Q: Can we infer the ideology of content/platform?

Idea: use a discrete choice model approach

Main mechanism: if content more right, more right users

My answer: **partially**

First Research Question

Claims of right wing promotion on X

We cannot observe (a lot of) content on X anymore

Q: Can we infer the ideology of content/platform?

Idea: use a discrete choice model approach

Main mechanism: if content more right, more right users

My answer: **partially**

Data counts n of people on X, not their **intensity**

First Research Question

Claims of right wing promotion on X

We cannot observe (a lot of) content on X anymore

Q: Can we infer the ideology of content/platform?

Idea: use a discrete choice model approach

Main mechanism: if content more right, more right users

My answer: **partially**

Data counts n of people on X, not their **intensity**

Most left users did not leave X: they reduced their time on X

Data

1. **SimilarWeb** overlapping traffic data (e.g. used by DSA)

Data

1. **SimilarWeb** overlapping traffic data (e.g. used by DSA)

For any 2 urls, "elpais.com" and "x.com", it gives

Data

1. **SimilarWeb** overlapping traffic data (e.g. used by DSA)

For any 2 urls, "elpais.com" and "x.com", it gives

N of people visiting both in month M (and demographics)

Data

1. SimilarWeb overlapping traffic data (e.g. used by DSA)

For any 2 urls, "elpais.com" and "x.com", it gives

N of people visiting both in month M (and demographics)

Issue: a user spending all his time on X == a user on X just once

Data

1. SimilarWeb overlapping traffic data (e.g. used by DSA)

For any 2 urls, "elpais.com" and "x.com", it gives

N of people visiting both in month M (and demographics)

Issue: a user spending all his time on X == a user on X just once

This gives me how diff newspaper readers used X across time

Data

1. **SimilarWeb** overlapping traffic data (e.g. used by DSA)

For any 2 urls, "elpais.com" and "x.com", it gives

N of people visiting both in month M (and demographics)

Issue: a user spending all his time on X == a user on X just once

This gives me how diff newspaper readers used X across time

2. Estimating ideology of newspaper readers: **CIS** data

Data

1. **SimilarWeb** overlapping traffic data (e.g. used by DSA)

For any 2 urls, "elpais.com" and "x.com", it gives

N of people visiting both in month M (and demographics)

Issue: a user spending all his time on X == a user on X just once

This gives me how diff newspaper readers used X across time

2. Estimating ideology of newspaper readers: **CIS** data

Survey of 30k, rich micro data, Spain

Data

1. SimilarWeb overlapping traffic data (e.g. used by DSA)

For any 2 urls, “elpais.com” and “x.com”, it gives

N of people visiting both in month M (and demographics)

Issue: a user spending all his time on X == a user on X just once

This gives me how diff newspaper readers used X across time

2. Estimating ideology of newspaper readers: **CIS** data

Survey of 30k, rich micro data, Spain

- “What newspaper(s) do you read? (including online)”

Data

1. SimilarWeb overlapping traffic data (e.g. used by DSA)

For any 2 urls, "elpais.com" and "x.com", it gives

N of people visiting both in month M (and demographics)

Issue: a user spending all his time on X == a user on X just once

This gives me how diff newspaper readers used X across time

2. Estimating ideology of newspaper readers: **CIS** data

Survey of 30k, rich micro data, Spain

- "What newspaper(s) do you read? (including online)"
- "From 0 (left) to 10 (right), what is your ideology?"

Demand Model

Demand Model

Reader i of newspaper m (whose **observed** ideology is μ_m) derives a utility of joining platform j of $j = \{X, \text{Bluesky}\}$

Demand Model

Reader i of newspaper m (whose **observed** ideology is μ_m) derives a utility of joining platform j of $j = \{X, \text{Bluesky}\}$

$$U_{ijm} = g_t + \alpha_m - \rho(\mu_m - \phi_j)^2 + \varepsilon_{ijm}$$

Demand Model

Reader i of newspaper m (whose **observed** ideology is μ_m) derives a utility of joining platform j of

$$j = \{X, \text{Bluesky}\}$$

$$U_{ijm} = g_t + \alpha_m - \underbrace{\rho(\mu_m - \phi_j)^2}_{\delta_{jm}} + \varepsilon_{ijm}$$

Demand Model

Reader i of newspaper m (whose **observed** ideology is μ_m) derives a utility of joining platform j of

$$j = \{X, \text{Bluesky}\}$$

$$U_{ijm} = g_t + \alpha_m - \underbrace{\rho(\mu_m - \phi_j)^2}_{\delta_{jm}} + \varepsilon_{ijm}$$

Intuition: Identify the platform-newspaper fixed effects δ_{jm} and assume these are solely explained by the distance from readers ideology to the platform ideology.

Demand Model

Reader i of newspaper m (whose **observed** ideology is μ_m) derives a utility of joining platform j of

$$j = \{X, \text{Bluesky}\}$$

$$U_{ijm} = g_t + \alpha_m - \underbrace{\rho(\mu_m - \phi_j)^2}_{\delta_{jm}} + \varepsilon_{ijm}$$

Intuition: Identify the platform-newspaper fixed effects δ_{jm} and assume these are solely explained by the distance from readers ideology to the platform ideology.

Estimate by matching predicted market shares and observed market shares

$$s_{jmt} = \frac{\text{N of readers of } m \text{ who used } j \text{ at } t}{\text{N of readers of } m \text{ at } t}$$

Demand Model

Reader i of newspaper m (whose **observed** ideology is μ_m) derives a utility of joining platform j of

$$j = \{X, \text{Bluesky}\}$$

$$U_{ijm} = g_t + \alpha_m - \underbrace{\rho(\mu_m - \phi_j)^2}_{\delta_{jm}} + \varepsilon_{ijm}$$

Intuition: Identify the platform-newspaper fixed effects δ_{jm} and assume these are solely explained by the distance from readers ideology to the platform ideology.

Estimate by matching predicted market shares and observed market shares

$$s_{jmt} = \frac{\text{N of readers of } m \text{ who used } j \text{ at } t}{\text{N of readers of } m \text{ at } t}$$

I can add demographics, platform characteristics, a distribution on μ_m , etc

Partial Result (Reminder: Spanish data)

Partial Result (Reminder: Spanish data)

My first thought: “Claims were overstated. Average users didn’t perceive anything”

Partial Result (Reminder: Spanish data)

My first thought: “Claims were overstated. Average users didn’t perceive anything”

Enikolopov: “This shows users are locked in. Can you see if they decreased their use?”

Where to go from here?

Where to go from here?

Most people I talked to agreed they decreased usage, but still used X

Where to go from here?

Most people I talked to agreed they decreased usage, but still used X

As why they decreased usage most agree posts showed to them were low quality (addictive for some) posts: **“junkification”**

Where to go from here?

Most people I talked to agreed they decreased usage, but still used X

As why they decreased usage most agree posts showed to them were low quality (addictive for some) posts: **“junkification”**

(My sample is biased: they are university profs and phd students, not particularly conservative)

Where to go from here?

Most people I talked to agreed they decreased usage, but still used X

As why they decreased usage most agree posts showed to them were low quality (addictive for some) posts: **“junkification”**

(My sample is biased: they are university profs and phd students, not particularly conservative)

Three key ingredients seem to have driven the changes in X:

1. Ideology
2. Junkification
3. Lack of an alternative: lock in (network effects?)

Where to go from here?

Most people I talked to agreed they decreased usage, but still used X

As why they decreased usage most agree posts showed to them were low quality (addictive for some) posts: **“junkification”**

(My sample is biased: they are university profs and phd students, not particularly conservative)

Three key ingredients seem to have driven the changes in X:

1. Ideology
2. Junkification
3. Lack of an alternative: lock in (network effects?)

It seems that X is now both worse and more-right than it “should”

Where to go from here?

Most people I talked to agreed they decreased usage, but still used X

As why they decreased usage most agree posts showed to them were low quality (addictive for some) posts: **“junkification”**

(My sample is biased: they are university profs and phd students, not particularly conservative)

Three key ingredients seem to have driven the changes in X:

1. Ideology
2. Junkification
3. Lack of an alternative: lock in (network effects?)

It seems that X is now both worse and more-right than it “should”

Why? What can we do?

Junkification “evidence” (from Mosleh et al., 2025)

They look at 10M posts in different platforms (X, Bluesky, Gab...)

Junkification “evidence” (from Mosleh et al., 2025)

They look at 10M posts in different platforms (X, Bluesky, Gab...)

Results (“associations”) at the platform level

Junkification “evidence” (from Mosleh et al., 2025)

They look at 10M posts in different platforms (X, Bluesky, Gab...)

Results (“associations”) at the platform level

- $\uparrow$ in conservatism of platform $\leftrightarrow$ $\downarrow$ quality of news

Junkification “evidence” (from Mosleh et al., 2025)

They look at 10M posts in different platforms (X, Bluesky, Gab...)

Results (“associations”) at the platform level

- $\uparrow$ in conservatism of platform $\leftrightarrow$ $\downarrow$ quality of news
- $\uparrow$ quality of news $\leftrightarrow$ $\downarrow$ engagement

Junkification “evidence” (from Mosleh et al., 2025)

They look at 10M posts in different platforms (X, Bluesky, Gab...)

Results (“associations”) at the platform level

- $\uparrow$ in conservatism of platform $\leftrightarrow$ $\downarrow$ quality of news
- $\uparrow$ quality of news $\leftrightarrow$ $\downarrow$ engagement
- $\uparrow$ political conformity $\leftrightarrow$ $\uparrow$ engagement

Junkification “evidence” (from Mosleh et al., 2025)

They look at 10M posts in different platforms (X, Bluesky, Gab...)

Results (“associations”) at the platform level

- $\uparrow$ in conservatism of platform $\leftrightarrow$ $\downarrow$ quality of news
- $\uparrow$ quality of news $\leftrightarrow$ $\downarrow$ engagement
- $\uparrow$ political conformity $\leftrightarrow$ $\uparrow$ engagement
- For X : $|\text{corr}(\text{quality}, \text{engagement})| \gg |\text{corr}(\text{quality}, \text{views})|$

Penalization in the algorithm?

Junkification “evidence” (from Mosleh et al., 2025)

They look at 10M posts in different platforms (X, Bluesky, Gab...)

Results (“associations”) at the platform level

- $\uparrow$ in conservatism of platform $\leftrightarrow$ $\downarrow$ quality of news
- $\uparrow$ quality of news $\leftrightarrow$ $\downarrow$ engagement
- $\uparrow$ political conformity $\leftrightarrow$ $\uparrow$ engagement
- For *X*: $|\text{corr}(\text{quality}, \text{engagement})| \gg |\text{corr}(\text{quality}, \text{views})|$

Penalization in the algorithm?

-> Worse feed + righter feed claims seem to be part of a whole

Is X causing this? Ad Prices (my humble evidence)

I have data on average per view price per day in FB, IG, X... in the US

Is X causing this? Ad Prices (my humble evidence)

I have data on average per view price per day in FB, IG, X... in the US

$$AdP_t = b_0 + b_1 \text{N users X and eldiario.es}_{t+1} + b_2 \text{N users X and elespanol.com}_{t+1} + \dots$$

Is X causing this? Ad Prices (my humble evidence)

I have data on average per view price per day in FB, IG, X... in the US

$$AdP_t = b_0 + b_1 \text{N users X and eldiario.es}_{t+1} + b_2 \text{N users X and elespanol.com}_{t+1} + \dots$$

Newspaper		Coefficient	SE
const		3.4974	2.9359
eldiario.es	(Left, Mid Q)	0.0799	0.0446
elpais.com	(Left, High Q)	-0.0479	0.0278
okdiario.com	(Right, LQ)	0.2238	0.0865
elespanol.com	(Right, HQ)	-0.1222	0.0554
marca.com	(sports, Q?)	0.0198	0.0424

Is X causing this? Ad Prices (my humble evidence)

I have data on average per view price per day in FB, IG, X... in the US

$$AdP_t = b_0 + b_1 \text{N users X and eldiario.es}_{t+1} + b_2 \text{N users X and elespanol.com}_{t+1} + \dots$$
